

## ABSTRACT

A method for killing or controlling weeds, insects, fungi, the release of spores, bacteria or sterilising a substrate is disclosed. The method includes the step of exposing  
5 the weeds, fungi, insects or insect eggs, spores or substrate to heat. A second step performed immediately after, before, or simultaneously with the heating step includes applying a liquid substance selected from a herbicide and/or pesticide and/or fungicide, and/or bacteriacide, and/or fish or animal-derived substance to the weeds, fungi, insects, spores or substrate.
